

Lightroom Mobile And Desktop Preset Instructions:

Hello, thank you so much for your order! Here are your instructions below to start using your new presets! If you require any further help or have a question big or small then please don't hesitate to contact us and we'll get back to you right away!

Lastly we just wanted to say a big thank you for choosing our presets to aid you in your photography journey:)

If you'd like to watch an installation video for mobile presets then please click the link below:

<https://www.prestigephotography.org/presetinstallationguide>

Step 1: Download the DNG files to your phone

Mobile presets come in a DNG file format. Some sellers allow direct download of the DNG files but some compress the files into a ZIP format.

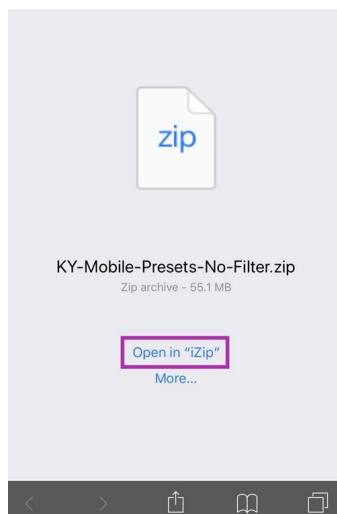

Note: If your presets are in XMP or Irtemplate format, they are for Lightroom Desktop, not Mobile.

If you see a DNG file when you click on your download link, **skip directly to Step 2.**

If you see a ZIP file, then you need to unzip the presets first.

Option A – Unzip files directly on your phone

You can use apps like iZip to unzip the file on your phone without a desktop computer. First make sure you download the iZip app to your phone ([iOS](#) or [Android](#)). Then click to download the file and tap on **Open in iZip**:

Now you have all of your DNG files inside your iZip app. **Go to Step 2 to import them into Lightroom.**

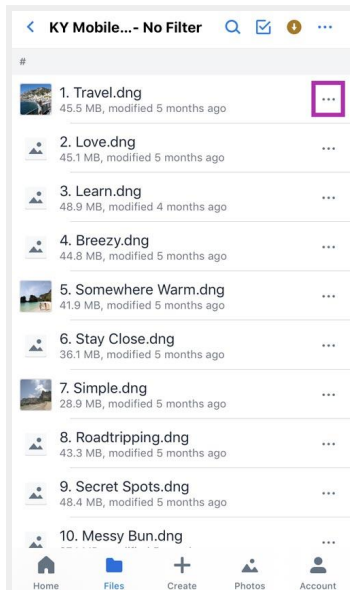

Option B – Unzip on a PC and transfer to your phone

If you have a computer handy, download the ZIP file on your laptop and double-click to unzip it. That should create a folder of the same name with the DNG image files inside.

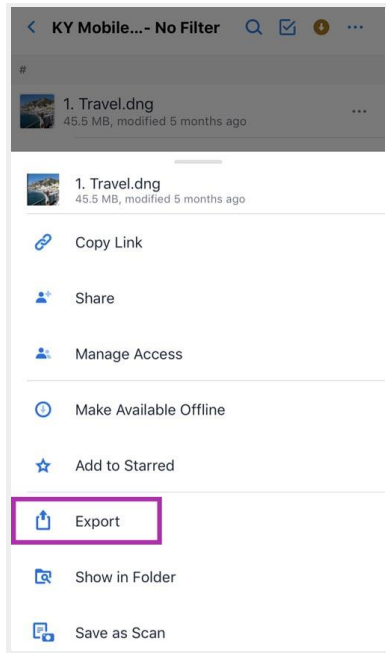

Now you need to transfer the DNG files to your phone via AirDrop, Dropbox or any other transfer method you prefer.

Simply drag your DNG files into your Dropbox folder and wait for the files to sync. Once all your files are synced, go into your Dropbox folder in your phone app and export each DNG file into your phone's camera roll. See detailed steps below:

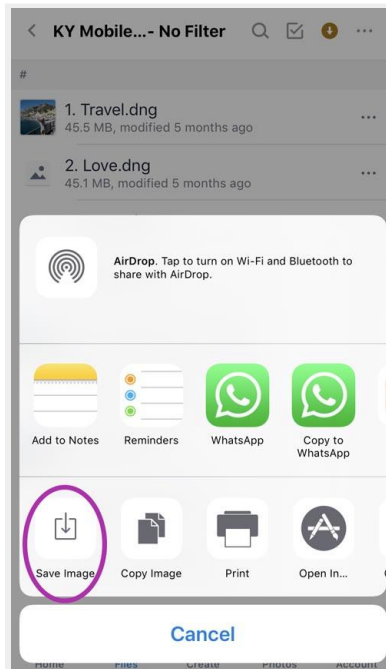

Open the Dropbox app on your phone and tap on the 3 dots button next to each DNG file:

Then tap on Export to save the presets to your phone:

Then tap on Save Image:

Step 2: Import preset files into Lightroom Mobile

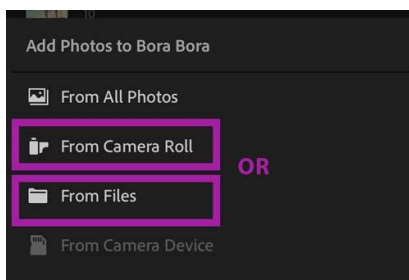

At this point you should have all of your DNG files saved to your phone – either in your iZip app or in your camera roll. The files serve as “preset carriers” and now you just need to add them to Lightroom mobile and save presets out of them.

If you go into your photo stream and see them as blank picture files, don't be alarmed – that's how they should look.

Open Lightroom Mobile and tap on the *Add Photos* button in the lower right corner:

If you downloaded your DNG files through iZip to files, select **From Files** and then navigate to iZip files. If you downloaded them directly to your Camera Roll through Dropbox or download, select **From Camera Roll**:

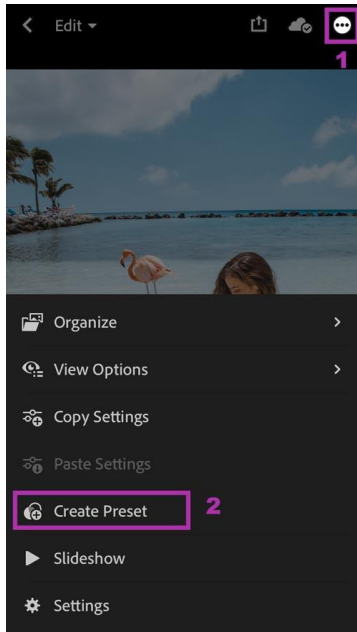

Next, select the DNG presets from your camera roll (or from iZIP) and import them into your Lightroom Mobile app:

Step 3: Save Settings as Presets

At this point you should have all of your DNG files imported into Lightroom Mobile. Locate the files and open one of them inside the app.

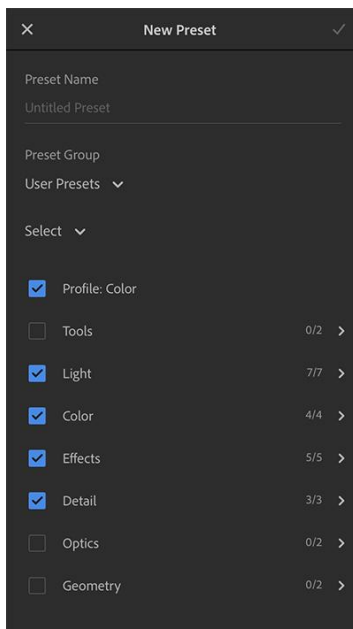

Now tap on the 3 dots icon at the top right of the screen and then tap on Create Preset:

Next you will see the **New Preset** screen (shown below) which contains all the options you can use to customize your preset. You can give your preset a name (highly recommended) and add it into a Preset Group in Lightroom. We recommend you create preset groups if you have a lot of presets and want to keep them organized.

The checkboxes below determine which picture settings you'd like to save with this preset.

I personally check all boxes except for Tools, Optics and Geometry. That's because those parameters vary from picture to picture and I will probably never need to crop or rotate different pictures exactly the same way.

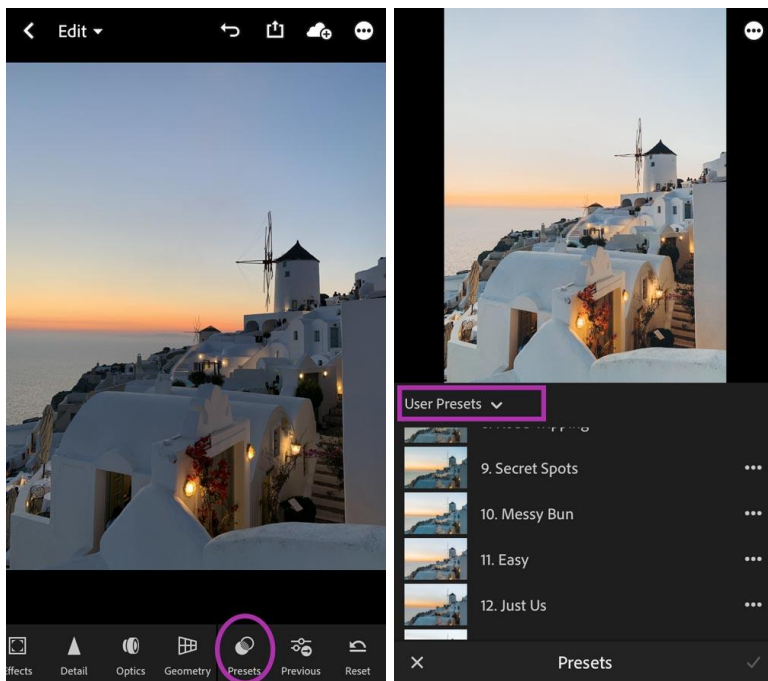

When you're done with the settings save your preset by tapping on the checkmark icon at the top right corner.

Repeat this step for each DNG file as you will need to save each preset separately. Don't worry though, you only need to do this once!

Step 4: Using Lightroom Mobile Presets

To use your new presets just go back into your library and open any photo you'd like to edit.

Find the Presets icon in the menu at the bottom of the screen and tap on it. Make sure the Preset Group that's selected is the one where you saved your new presets. If you saved them in the User Presets group, select that.

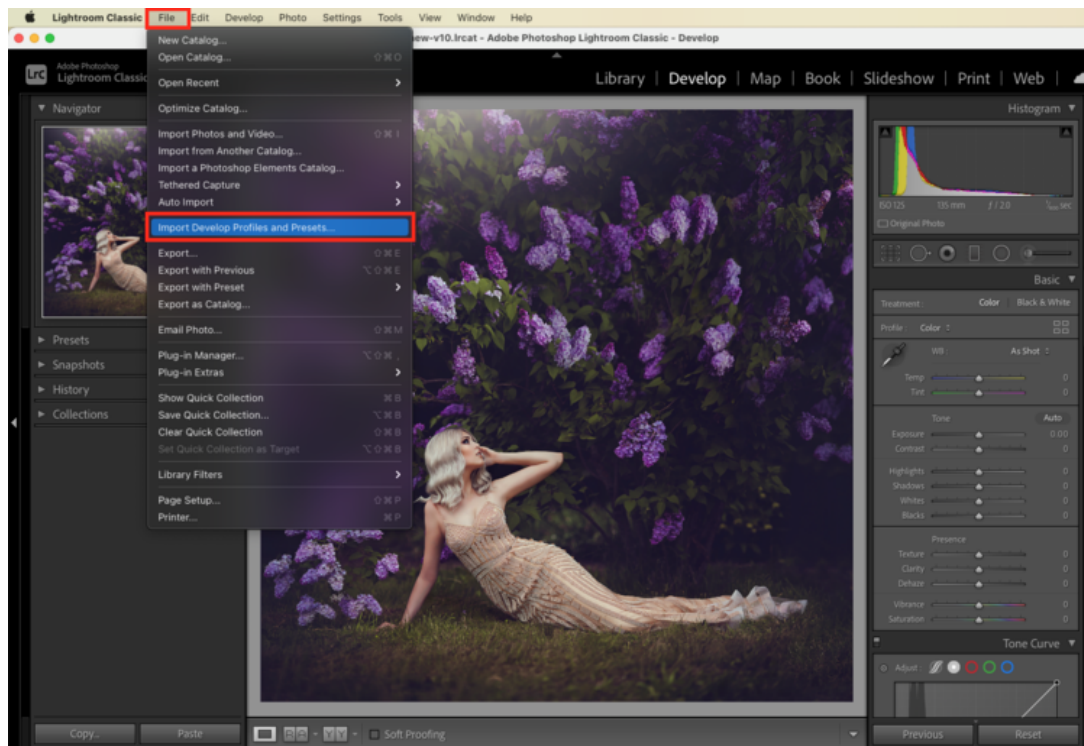

Now you can edit the photo by tapping on a preset from the list and then tapping on the checkmark. You can still continue to edit the photo and make adjustments if you like, after you've applied the preset.

Desktop Preset Instructions

Desktop Instructions:

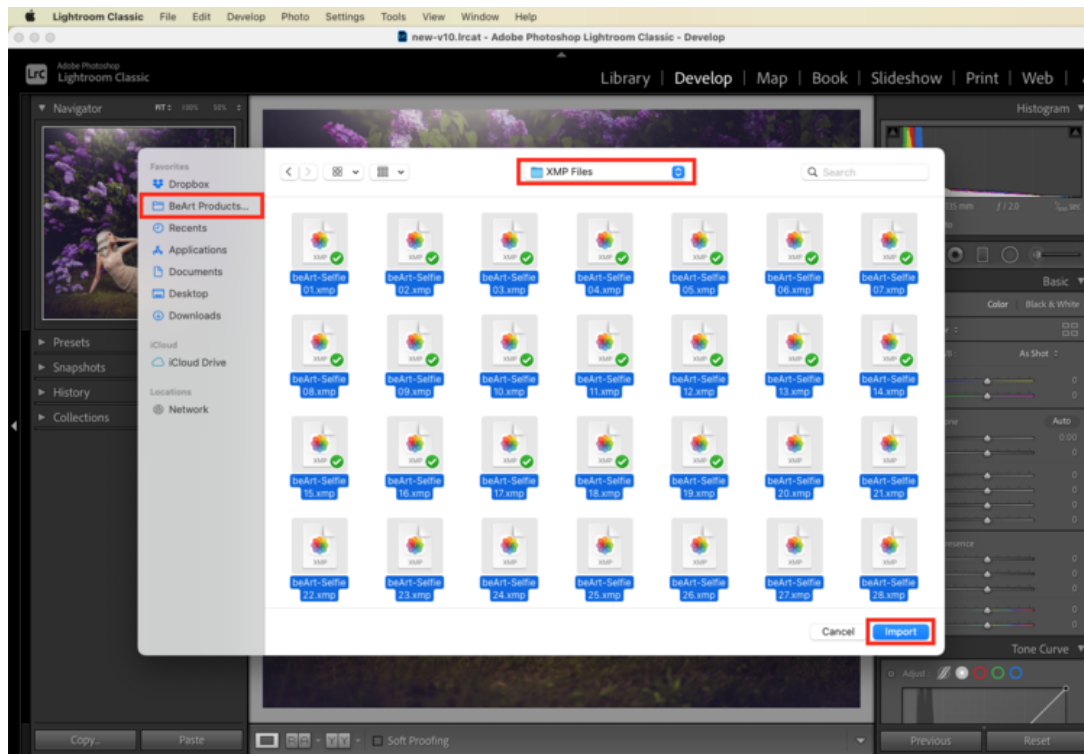

1. **Open Lightroom**, from the menu bar, choose **File** > Click on **Import Profiles & Presets**

View fullsize

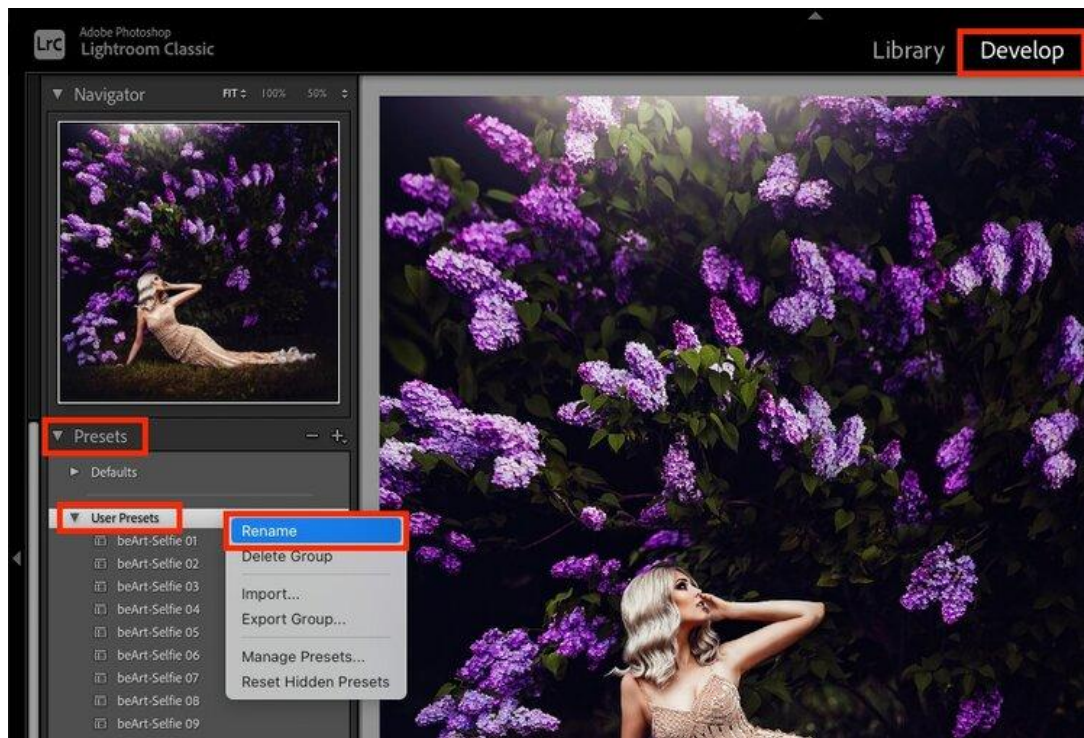

2. In the Import dialog that appears, **browse to the required path** and select **Lightroom Presets (XMP Files)** that you want to import, then **click on Import**

View fullsize

3. If you would like to **change the name from User Presets** to something else, just right click on mouse and select - **Rename**

View fullsize

4. **Restart** Lightroom CC Classic to activate the new Presets for Lightroom
